

What should I know about the Jynneos monkeypox vaccine?

- Jynneos is a two-dose vaccine. The second dose is administered 4 weeks after the first.
- It becomes most effective 14 days after the second dose.
- If you are diagnosed with monkeypox after your first dose, it is generally not recommended that you receive your second dose (though some immunocompromised people on a case-by-case basis).
- Vaccination is not recommended for people who have already been diagnosed with monkeypox. Talk to your doctor before vaccination if you have symptoms.
